

driver.py

* Entry point

* Main goal is to instantiate Executive class which is in executive.py

executive.py

- This file will contain the Executive class
- It will handle file I/O
- Once you parsed the file / read the file, you have to ensure that you are splitting it based on the given requirements
 - * Hint: ~~tab~~ split and new line split
- When you split each line, make sure that you are fetching the values ie
(name, gibbonsrating, baverage, avg weight, year published, bbg best players)
correctly

- After fetching the values, create an object of BoardGame from boardgame.py. Creating the object is important in order to solve this lab task.

Note: Having strong grasps in OOP is a fundamental requirement. Trust me it will make your life much easier. If you are planning to develop your career path in industry, it is a mandatory requirement.

I have added the resources for Python tutorial which is in the Lab README.

boardgame.py

- It will contain the Boardgame class
- Consider this class as a model/structure for representing the game
- If you are used too with databases, classes are like Table
